Challenges

- Working together in separate places was challenging in communicating with each other, we solved this challenge by hosting ZOOM meetings.

- Sharing folders between us was challenging to get the latest updates, we solved this challenge by using GitHub as our main sharing repository.

- After any update in database, we should share it again and dealing with sharing the database and to avoid any conflict between any version was challenging, so we arranged the export of database and import the database between us.

- Divide the work between us and distribute the work that needs to be done to complete the website. We solved the problem by dividing the work based on functionalities and the needed work and related pages together.

- Some work depends on another work, this dependency required us to arrange our work; we have placed related pages together and some pages we arranged ourselves as pairs instead of one member to work on it.

- Sometime Xampp did not work as needed and some errors has occurred, we have used Stack overflow website in order to find solutions to our problems.

- Dealing with Syntax of 4 new programming languages was challenging to us , we have solved the problem by training and continuous trying.

- Dealing with MyPhpAdmin was new to us so we took time to learn how to use it and deal with it.

- Combine PHP with JavaScript to use a variable of one in the other, it does not work so the solution was in ajax.

File Names

● Veterinary clinic manager pages   ● Pet owner pages   ● General pages

package/folder file name	purpose
profile_img	Folder contains images that we retrieve from database
Add-service.css	Styling sheet for adding service page for veterinary clinic manager
